

iTV – iHedge Trade Validator

Product description

iTV is a user-friendly Workflow-orientated tool which displays the real time status of all trades in process.

iTV offers real time risk management and eliminates loss of trivial everyday errors.

iTV monitors all trade transactions real time and displays them in a Blotter which gives the business an overview of the current status of all ongoing transactions. iTV gives you the opportunity to respond to intraday errors and will thus save you from incidents which emerge after the trades are sent off.

iTV can be configured to stop or pause certain trade processes. iTV reacts on rules which are defined by the business.

iTV's validation areas are weighted so they are in accordance with your business rules regarding deviations and risk level.

iTV is a generic tool with the ability to adapt and scale so it precisely fits your business.

iTV Features

- Real time Trade Monitoring
- Adjustable and scalable weighting of each area of validation
- Setup and Configuration of desired actions including:
 - Process Information
 - Error notification
 - System warnings
 - Stop processes
 - Pause/resume processes

iTV supports workflow oriented BPA, which facilitates the ability to define and process desired flows.

Each point of validation is described as a workflow which reacts on rules.

Adding rules is done with a simple procedure described in XPath.

iTV validation areas:

iTV gives you built in handling of:

- Special Clauses
- Special Annexes
- Special fixing rules
- Payment - documentation
- Terms and Conditions – documentation
- Cash flows validation
- Dealer authentication
- Limit/lines validation
- Amount range validation
- Currency validation
- Counterparty verification
- Date validations
- Holiday calendar validation
- Interest rate validation
- Exercise notification
- Stub date validation
- Payment date validation
- Book validation

iTV – iHedge Trade Validator

iTV setup

With the iTV you will get an easy and elegant solution with minimal changes to your current IT infrastructure.

iTV is a Cloud component and is very easy to Integrate with trading systems and other essential systems which are part of the business processes . It takes 2-4 workdays to set up.

iTV runs inside your firewall and is therefore installed on your internal servers. This means that the data and information involved at no time operate outside your firewall and thus maximize safety. This solution can advantageously be chosen for companies with very sensitive data.

iTV has a long list of areas which are validated. iTV is a generic tool which offers you customization and allows you to add your own validation-check points which are used in your particular business.

Other features

iTV can be connected directly to core systems such as Summit Misys, Dimension, Marketwire, Swap Swire, Microsoft Dynamics and SAP but can also easily and quickly be integrated with other IT systems.

The iTV standard portal is a web solution that can be accessed and run in all the standard internet browsers (IE, Safari, Firefox, Opera, and Chrome).
